

Help “Clear the Air” with The RITE Door®

Adams Rite's high performance integrated door system, The RITE Door®, has been awarded the coveted GREENGUARD Indoor Air Quality Certification® by the GREENGUARD Environmental Institute.

The GREENGUARD Environmental Institute is nationally recognized for helping improve indoor air quality in buildings. Certified products must meet stringent chemical emissions requirements, such as being screened for more than 10,000 volatile organic compounds (VOCs). Products undergo both annual recertification and quarterly quality monitoring tests to maintain this elite credential.

This means that The RITE Door can be specified with total confidence in school and health care applications, as its low-emission coatings and finishes will not impact indoor air quality or negatively affect students, patients or staff.

GREENGUARD Indoor Air Quality Certification® is one of many factors that put The RITE Door clearly ahead of the competition and make it the smartest choice in the industry for fire-rated intergrated door systems.

- The Rite Door **Features pre-installed hardware that meets fire codes and is much faster and easier to install than other doors**
- This new system **provides a maximum clear opening width that satisfies code requirements for hospitals and other public buildings and is in full compliance with ADA guidelines**
- It utilizes a low-profile exit device that is designed to resist wear and vandalism while providing optimum durability
- A cutting edge variety of finishes and options, including lever trim and electrification makes The RITE Door the aesthetically-pleasing solution

Adams Rite is fully committed to helping create healthy indoor environments in schools, health care and commercial
